

# Supplier Integration

## Plug-In for Microsoft Dynamics RMS®

RITE's Supplier Integration plug-in for Microsoft Dynamics RMS adds the ability to upload and synchronize a supplier provided product catalog/price list to the store's inventory database. This tool can also connect to a supplier to download invoices and then import them as purchase orders into the store's database. If used in conjunction with Microsoft Dynamics RMS Headquarters the Supplier Integration will automatically create Cost Change worksheets for each connected store.

- Upload supplier pricing files into RMS
- Upload special deal pricing start and ends dates
- Shows new costs and changes in profit margins
- Populates by supplier item number and will alert user if file information conflicts with store information
- Flags new supplier items or items which need to be updated/added to store database
- Utilizes EDI, ASCII, Excel and XML formats (others per request)
- Also integrates with RITE's Advanced Purchase Order plug-in for Microsoft Dynamics RMS

\* currently integrated with the following suppliers/distributors: Glazer's, Johnson Brothers Liquor Company, Wirtz Beverage Group and Republic National Distributing Company. Additional suppliers/distributors can be added per request. Full functionality is dependent on supplier/distributor participation.

Contact RITE for additional information.
