

Age Verification

Plug-In for Microsoft Dynamics RMS®

RITE Age Verification utilizes drivers license or state ID technology to verify age and identification with a swipe/scan. This program adds functionality to Microsoft Dynamics RMS to verify the age of customer when purchasing regulated products.

RITE Age Verification can be setup to assist the cashier on demand or it can be configured to prompt when certain products are sold. It can also force specific employee groups to swipe an ID and will NOT allow them to proceed without doing so, unless they have a manager's permission.

For liability purposes, when an ID is swiped, data captured from the ID can be tracked within the transaction. This information can then be configured to suit your needs. A simple lookup of the transaction in the Microsoft Dynamics RMS journal can show you details of the verified age.

- Makes it easy to be legally compliant.
- Can block a sale from completing if proper ID is not swiped.
- Works with both magnetic stripe and 2D barcoded IDs. Also can be set up for manual entry.
- Journal record and receipt verify that an ID was swiped or scanned.
- Program configuration is flexible to suit your business needs.
- Choose whether all employees must swipe/scan ID's or only your newer, inexperienced employees.
- Fast and easy

The screenshot displays a Microsoft Dynamics RMS interface. On the right is a 'Sales Receipt' window with the following details: Transaction #: 17891, Date: 11/20/2008, Time: 10:37:40 AM, Cashier: 1, Register #: 1. Below this, it states '***Age Verified 1/8/1982***' and 'JOE JOHNSON'. To the left, a 'Manual Entry' dialog box is open, showing 'Customer Age' and 'Customer is 27 years' in red text, with a note '*This information was entered manually.' Below that, an 'Age Verification' dialog box prompts the user to 'Please swipe Driver's License or State ID now.' It features two input fields: 'On or Before - Age 21' with the date '2/24/1988' and 'On or Before - Age 18' with the date '2/24/1991'. There are 'Manual Entry' and 'Cancel' buttons at the bottom. On the far right, a partial receipt table is visible, showing items like 'ERLOT' for \$80.00, a 'Sub Total' of \$80.00, and a 'Total' of \$85.40. A barcode is also present.
