

RITE Coin

Coin Changer Integration for Microsoft Retail Management System (RMS).

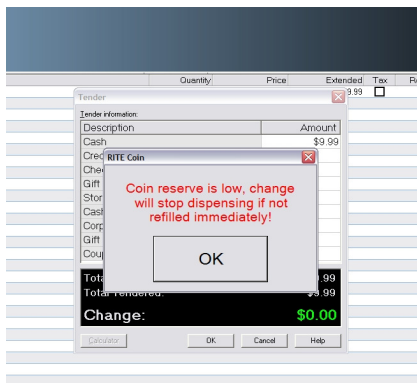

The RITE Coin tool integrates one of the most popular lines of coin changer hardware (made by the Telequip Corporation) with Microsoft Retail Management System (RMS).

Change Dispensing

It's simple, after you ring a transaction in RMS any of the non-dollar change that should be given to the customer is automatically dispensed by the coin dispenser hardware. Easy as that.

Low Change Notification

The cashier is notified (as shown below) when the coin changer begins to get low on change – it even tells them when change cannot be dispensed. Very straight forward to use and maintain.

Configurable

The program is very configurable. You can change the com ports used, the baud rates, etc.
